Equipment Systems APIs

Installed Equipment

Installed equipment is equipment that has been sold and installed at a location. A record of the equipment is stored in ServiceTitan to allow users to track details about the equipment. A ServiceTitan user can either sell and then install equipment to create a record of it or manually add equipment to a location record. Users can link forms, services, and memberships to equipment in order to create a complete history of the work that has been done.

High level use cases for these APIs:

- Get all equipment at a specific location
- Retrieve information about specific equipment that has been installed
- Update information about specific equipment that has been installed
- Create a record of installed equipment at a location
